

Load Once, Load Legal, and Go

Maximize efficiency with On-Board Scales

Available for Air and Mechanical Suspensions

Fontaine Modification can seamlessly integrate an on-board scale into just about any air-ride or mechanical suspension vehicle to gain the most productivity from your new vehicle, eliminate loading guesswork and the time and repeated expense of public scales.

Contact (800) 366-8246 or your local Fontaine Modification sales rep to discuss your vehicle and the options available.

Save Time and Miles by Eliminating the Need to Scale Loads

On-board scales are quickly becoming a must-have option for fleets large and small, providing essential weight information to maximize load efficiency and profits with every trip. Most fleets use on-board scales to maximize payloads, manage axle load weights and to understand vehicle GVW. However, there are many real-world benefits well beyond these typical ideas, such as reducing liability in an accident by knowing your vehicle is not overweight, extending vehicle life by not over-stressing components, eliminating overweight tickets and removing entirely the loss of time and money of using public scales. With the ever-growing list of vehicle equipment options, knowing your weight in real time is a critical part of fleet safety and maximizing profits on every load.

Load Optimization

Maximum Service Hours

Overweight Protection

Savings in Fuel, Time, & Money

Safety & Compliance

Integrations & Communications

On-Board Scales Add:

- Increased Vehicle Productivity by Maximizing Every Load
- Help to Extend Driver HOS Efficiency
- Increased Road Safety & Decrease Vehicle Liability
- Extending Vehicle & Component Life

On-Board Scales Eliminate:

- Repeated Scale Events (Fees, Time Searching, Driving & Waiting)
- Unproductive Time & Miles for Re-Checking Load Weights
- Under-Loading and Load "Guesswork"
- Overweight Fines & Possible Red Tags
